

Design shown: factory rack with 20 posts. Next Level rack: 30 posts, 15 per rail

10′ ROUND-POST REMNANT RACK

Galvanized remnant rack · 30 round posts, 36 in · rubber on the base

PRODUCT OVERVIEW

Two 10 ft galvanized base rails with 15 post holes each and 30 round posts, 36 in high, keep remnants and offcuts standing, visible and sorted by material, color or job. Rubber on the base protects the stone edges from chipping.

30	36 in	15	10 ft
round posts	post height	holes per rail	galvanized base rails

KEY FEATURES

Rubber on the base

Pieces stand on rubber, not steel, so edges and polished faces do not chip.

A post in every hole

15 holes per rail and 30 posts: lean each piece onto the post that suits its size.

Hot-dip galvanized

Rails and posts are galvanized for the yard and wet shops.

Sort the way you quote

Give each section a material or color; small jobs get quoted from what is on the rack.

Next to the saw

Rack offcuts beside the saw or CNC as they are cut, ready for the next small job.

Two remnant racks

Pair it with the square-post rack: square posts for big pieces, round posts for many small ones.

IDEAL APPLICATIONS

- Remnants and offcuts sorted by material or color.
- Pieces kept upright for quoting small jobs.
- Next to the saw or CNC.
- Yard or warehouse.

SQUARE POSTS OR ROUND?

This rack holds many smaller pieces on 30 round posts; the square-post rack uses 16 heavier square posts for larger pieces.

DETAILS AND SPECIFICATIONS

10′ Round-Post Remnant Rack · technical data

Post holes along the rail

Ships as two rails and loose posts

RACK

Base	2 rails, 10 ft, 15 post holes each
Posts	30 round posts, 36 in high
Stone contact	Rubber on the base
Finish	Hot-dip galvanized

RATING

Rated load, weight	On request

INCLUDED

- 2 galvanized base rails, 15 holes each.
- 30 round posts, 36 in.
- Rubber on the base.

TWO REMNANT RACKS

	Round posts	Square posts
Posts	**30 round, 36 in**	16 square, 36 in
Holes per rail	**15**	10
Best for	**Many smaller pieces**	Larger pieces
Base / finish	**Rubber, galvanized**	Rubber, galvanized

Before you order: Plan the floor space and the spacing of the two rails for your remnant sizes; keep heavy pieces low. Factory data, 2026 (proforma invoice, drawings, data sheets and quotations). Capacities are the factory's ratings for the product itself; your floor, lifting equipment and loading method must suit the load. U.S. values first, metric in brackets; added conversions are approximate. Specifications are subject to change without notice. Photographs: the factory's rack of this design, shown with 20 posts as an illustration of the design; the Next Level rack has 30 posts of 36 in, one in each of the 15 holes per rail.
