

10′ SLAB RACK

Galvanized ground-rail rack · 16 posts · rubber strips · 44,000 lb

PRODUCT OVERVIEW

The lighter of the two Next Level slab racks: two hot-dip galvanized ground rails with 16 removable posts, and rubber strips on the rails under the slab edges. Same 10 ft storage lane as the heavy-duty rack, built from lighter steel for fewer slabs per rack, with a 44,000 lb total rating.

44,000 lb	16	60 in	10 ft
total rating (20 t)	removable posts	post height	galvanized rails

KEY FEATURES

Rubber under the slab

Rubber strips along the rails keep slab edges off the steel.

Removable posts

Lift the posts out and set them where your slabs and bundles need them.

Hot-dip galvanized

Rails and posts are galvanized for the yard and wet shops.

Two racks, one system

Same footprint as the heavy-duty rack: use this one for lighter stock and the 66,000 lb rack for the heaviest bundles.

Crane, lifter or forklift

Load from the aisle with an overhead crane, a vacuum lifter or a forklift.

Capped posts

Every post carries a cap on top.

IDEAL APPLICATIONS

- Full slabs in the warehouse or yard.
- Bundles kept together by job or material.
- Loaded by crane, vacuum lifter or forklift.
- Outdoor and wet areas.

PLAN BY WEIGHT

Keep the rack within its 44,000 lb total and lean every slab onto a post. For the heaviest stock choose the 66,000 lb heavy-duty rack with wood inserts.

DETAILS AND SPECIFICATIONS

10′ Slab Rack · technical data

Factory sample: rails with rubber strips

RACK

Nominal length	10 ft
Posts	16, removable, 60 in
Slab contact	Rubber strips on the rails
Finish	Hot-dip galvanized

RATING

Total	44,000 lb (20 t)
Per slot, rail size, weight	On request

INCLUDED

- 2 galvanized ground rails with rubber strips.
- 16 removable posts with caps.

Slabs per rack	More	**Fewer**
Posts / finish	16 posts, galvanized	**16 posts, galvanized**

Before you order: Plan the floor area, the rail spacing for your slab length and lifting access along the rack. Factory data, 2026 (proforma invoice, drawings, data sheets and quotations). Capacities are the factory's ratings for the product itself; your floor, lifting equipment and loading method must suit the load. U.S. values first, metric in brackets; added conversions are approximate. Specifications are subject to change without notice.
